

KEMPEROL PU Aqua

The reflecting waterproofing

Product advantages at a glance:

Solvent-free and odourless

Single-component and can be applied directly

Can be applied up to max. +40 °C

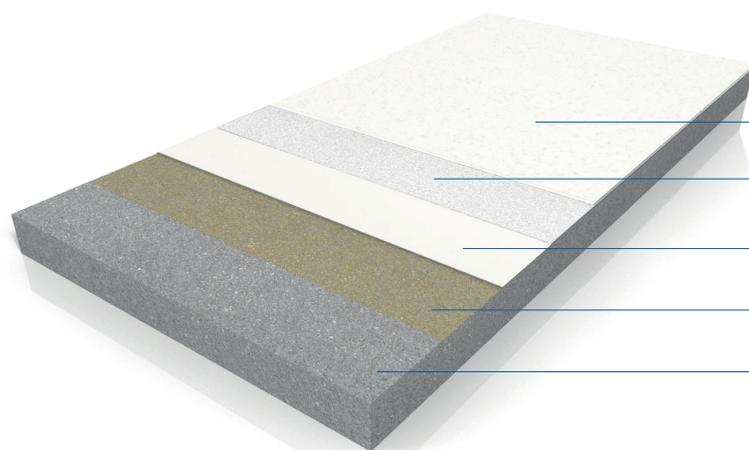

Prevention of overheated roofs

The cooling for the roof

KEMPEROL PU Aqua is particularly suitable for surface waterproofing, for connections and details on the roofs in areas with warm outdoor temperatures, as it can be applied perfectly up to +40 °C.

With the solvent-free **KEMPEROL PU Aqua** you create a white, reflecting surface, whereby roof surfaces heat up less and the reflectivity is increased.

By the way: For **KEMPEROL PU Aqua** the degree of solar reflectance, which describes the amount of reflected radiation from the roof, lies at 81%. The higher the value, the cooler the roof.
